[\(1\) Implied Temperature Rise Methodology - Executive Summary](#)

*Projected reduction per year: This figure indicates the reduction per year of absolute emissions if the target is fully met until the stated target year. A negative number corresponds to a decrease in absolute emissions (for example -5% is an annual reduction of 5% per year). A positive figure corresponds to an increase in absolute emission. This can be caused by targets which do not cover all emissions or are intensity based and therefore do not lead to a reduction of absolute emissions.
